SUMMER INTERNSHIP OPPORTUNITY FOR A SOFTWARE DEVELOPER

Engineering
TECHNOLOGIES, LLC

BACKGROUND HISTORY & COMPANY DESCRIPTION

Engineering Technologies is a locally owned limited liability company ignited by the need to modernize the construction industry. Our sister company, DC Engineering Group, PSC was incorporated in 2011 to provide design, management and inspection services to private and public sectors. It is then when we realized there was a need for a centralized cloud-based software that would provide visibility and real time data to all the players involved in a construction project. Customer feedback and research paved the way to Engineering Technologies and a one of a kind, module-based, project optimization and control software: Build UP. (www.buildupsystems.com)

JOB SUMMARY

We are seeking a passionate software developer who is motivated, pays close attention to detail and is well acquainted with both front and backend web development. Intern will work with an interdisciplinary team to design, test and implement new software features that optimize processes within the construction industry. Our offices are located at Ponce de Leon Ave #1519 in San Juan and this opportunity may lead to a full-time position after graduation.

POSITION REQUIREMENTS

- Must be enrolled in Computer Engineering or Software Engineering Programs
- Fully Bilingual
- Excellent verbal and written communication skills
- Knowledge of C# / .NET / PHP / Angular / React

HOURLY RATES

- Internship: $17/hr
