OBJECTIVES

Academic Interests: To contribute to the success of an Engineering Department as a **mentor, researcher, and lecturer** within the areas of Industrial Engineering, Operations Research, Manufacturing, and Biological Data Analysis.

General Research Objective: To devise methods and strategies of statistical characterization, mathematical modelling, and optimization and apply them to solve relevant problems in manufacturing, decision-making, and biological analysis.

Specific Research Objectives: Currently, I am working on (1) simulation optimization of manufacturing processes; (2) analysis of biological data; and (3) decision-making under stress. In (1) we seek methods to identify competitive design or processing settings with low number of simulation or experimental runs; in (2) we seek for data analysis strategies for large biological experiments; and in (3) we develop operations research aids for decision making during and after disasters.
